Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a clamping assembly, classified in class 269, subclass 24.
- II. Claims 8-9, drawn to a method of clamping a device under test, classified in class 29, subclass 559.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by another apparatus. For example the process can be performed by an apparatus where the one or more clamping members are attached to a moveable member rather than a stationary member. Further, the apparatus can be used in another process. For example, the apparatus can be used as a grapple for transporting a workpiece rather than for holding a device during a testing operation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
